It is pref. prepd. in situ by treating an acetyl chloride deriv. of formula (V) with an organic amine (IV) (pref. 1-3C alkylamine).</p> <div style="text-align: center;"> $R_3 - \begin{array}{c} H \\ \\ C - C = O \\ \quad \\ Cl \quad Cl \end{array} \quad (IV) \quad \longrightarrow \quad (III)$ <p style="text-align: center;">(V)</p> </div>
<p>2-Azetidinone derivs. of formula (I) are new:</p> <div style="text-align: center;"> $\begin{array}{c} R_1 - CH - N - R_2 \\ \quad \\ Cl - C - C \\ \quad \\ R_3 \quad O \end{array} \quad (I)$ </div> <p>R₁ = furyl or methoxyphenyl; R₂ = benzimidazolyl, phenyl, methoxyphenyl, methoxycarbonylphenyl or ethoxycarbonylphenyl; and R₃ = H, phenyl or chloro.</p> <p>USE (I) have excellent physiological activity as carcinostatic, immuno-controlling and antibacterial agents and are useful as pharmaceuticals.</p>	<p>J61057580-A</p>	

EXAMPLE

A soln. contg. chloroacetylchloride in anhydrous benzene (10 ml) was added dropwise to a soln. contg. (II: R₁ = furyl, R₂ = phenyl) (0.01 mol.) and Et₃N (1.52 g, 0.015 mol.) in anhydrous benzene (50 ml) at 5-10°C with stirring. The reaction mixt. was allowed to rise to room temp. and stirred for 2 hrs. The Et₃N.HCl was removed and the solvent distilled off under reduced press. The residue was chromatographed (silica gel : eluent, hexane-EtOAc) (5 : 1 - 50 : 1) to give (I: R₁ = 2-furyl, R₂ = phenyl, R₃ = H). (8ppW69WSDwgNo0/0).
